

CARSON FULMER

Tampa, FL · carsonfulmer27@gmail.com · (813) 990-9772 · www.carsonfulmer.com · linkedin.com/in/carsonfulmer · github.com/carsonful

EDUCATION

University of Florida

Bachelor of Science in Computer Science *GPA: 3.5*

Relevant Coursework: Data Structures, Object-Oriented Programming, Computer Organization

Gainesville, FL

January 2024 - May 2026

SKILLS

Languages & Frameworks:	C++, C, C#, TypeScript, Python, JavaScript, React, QT Creator, Express
Tools & Technologies:	Git, GitHub, GitLab, MongoDB, RESTful APIs, Google Cloud, Linux, Jira, Visual Studio
Core Competencies:	Algorithms, Data Structures, Concurrent Programming, Cloud Deployment, UI/UX Design, Database Management, API Integration, Full-Stack Development

PROFESSIONAL EXPERIENCE

Centene Corporation

Application Development Intern - IT Claims Platform

Remote, FL

May 2025 - August 2025

- Led .NET framework upgrade from version 6 to 9 using C# for Division of Responsibility (DOR) system supporting Medicare Provider Delegation initiative across Xcelys and Amisys platforms at a Fortune 25 healthcare enterprise
- Updated and maintained critical claims processing configurations including DOOR, DOFR, and OOA components to ensure uninterrupted operations for healthcare claims processing
- Debugged and resolved post-upgrade compatibility issues while implementing comprehensive unit testing practices to maintain code integrity and deployment readiness
- Deployed applications using Docker containers and GitLab CI/CD pipelines, streamlining development workflows and ensuring consistent deployment across multiple environments
- Developed proficiency in C#/.NET framework, GitLab version control, and Visual Studio while ensuring platform stability and long-term adaptability for future .NET releases

University of Florida - Computer Science Department

Undergraduate Research Assistant

Gainesville, FL

January 2025 - Present

- Engineered a distributed simulation platform using Ponylang to accelerate agent-based simulations
- Designed scalable architecture supporting multiple concurrent users and collaborated with faculty to improve computational efficiency of the platform and provide oversight as well as feedback
- Applied actor-based concurrency patterns to create fault-tolerant systems capable of handling complex scientific simulations preventing deadlocks and variable races, allowing for a safe concurrent program

Inter cruises - Shoreside & Port Services

Customer Service Representative

Tampa, FL

August 2021 - December 2023

- Facilitated experiences for thousands of monthly travelers while resolving numerous customer inquiries with consistently positive feedback and communication between other employees
- Coordinated with customs officials to optimize passenger processing and improve terminal transit times
- Developed knowledge of travel regulations and utilized effective communication skills in high-pressure environments

SOFTWARE DEVELOPMENT PROJECTS

Starcrosser - Visualization Tool - C++, QT Creator

github.com/fmcubium/Starcrosser

An educational tool that helps users comprehend vast interstellar distances using familiar vehicle references.

- Constructed an interactive visualization application with optimized path-finding algorithms for efficient route calculations among different stars in our universe using a dataset of over 100,000 stars
- Designed memory-efficient data structures and led Git-based development resulting in minimal bugs at release
- Created intuitive UI allowing users to compare travel times between star systems using familiar vehicle references, in which some algorithms provided 60% faster calculations between stars

DoneTogether - Goal Platform - TypeScript, React, MongoDB, Express, Authentication github.com/oixel/DoneTogether

A collaborative goal-tracking platform connecting users with similar aspirations for mutual accountability and support.

- Created a full-stack web application that increases user accountability through a collaborative goal-tracking approach where users can invite their peers to a shared goal which is shown to improve completion rate
- Architected RESTful API endpoints with React UI components to deliver a responsive, engaging user experience while continuing to be easy to navigate and/or sign up for new users
- Integrated social features like progress sharing, milestone celebrations, and collaborative challenges to enhance motivation toward completing the shared goal between users and their peers

Canvas Calendar Notification System - Python, APIs, Google Cloud

github.com/carsonful/canvascalendar

An automated system that fetches Canvas LMS assignments and delivers personalized notifications with weather updates.

- Developed a notification system that improved assignment completion rates among University of Florida students
- Leveraged Pandas for reliable data processing and deployed the solution on Google Cloud with high availability
- Implemented intelligent priority sorting to highlight urgent assignments and provide customizable notification scheduling using a builtin function in the virtual machine called a cronjob

CERTIFICATIONS

Microsoft Technology Associate (MTA): Python Programming, Security Fundamentals

April 2022
